ABSTRACT

A method of selecting a communication interface to transmit data in a wireless communication network is disclosed. The method comprises the steps of providing a plurality of communication interfaces in a wireless communication device; polling, by a first application, at least one communication interface of the plurality of communication interfaces to determine whether the at least one communication interface has become available; determining that the at least one communication interface of the plurality of communication interfaces has become available; and transmitting data associated with the first application on the at least one communication interface.
